PROFESSIONAL SUMMARY

Full-Stack Developer with hands-on experience building end-to-end web applications using the MERN stack (MongoDB, Express.js, React.js, Node.js). Proficient in RESTful API design, PostgreSQL database development, JWT authentication, and OpenAI API integration. Currently pursuing a Bachelor of Computer Applications (BCA) at Christ University Delhi NCR. Experienced in Agile development environments, version control with Git, and deploying applications on cloud platforms such as Vercel. Seeking a full-stack or backend internship to contribute to a high-performing engineering team.

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), Python, C++, SQL
Frontend Development: React.js, HTML5, CSS3, Responsive Web Design
Backend Development: Node.js, Express.js, RESTful API Design
Databases: MongoDB, PostgreSQL, SQL
Tools & Platforms: Git, GitHub, Vercel, VS Code, Linux (Shell/Bash)
APIs & Integrations: OpenAI API, Vercel AI SDK (AI Workflow Development)
Methodologies: Agile Collaboration, MVC Architecture, Role-Based Access Control (RBAC)
Other: JWT Authentication, Session Management, Data Modeling, Schema Design

WORK EXPERIENCE

PostgreSQL Developer Intern 2026 | Gurugram, Haryana

PV Advisory

- Designed and maintained PostgreSQL relational databases to support business reporting, data analysis, and operational workflows.
- Wrote optimized SQL queries, stored procedures, indexes, and views to improve data retrieval performance and reduce query latency.
- Collaborated with cross-functional teams including product and backend engineers to model normalized data schemas aligned with application requirements.
- Performed database migrations, data validation, and quality checks to ensure integrity across environments.

Hackathon Participant — Full-Stack Developer March 2026 | Gurugram, Haryana

Master's Union Hackathon

- Collaborated in a team of 3–5 developers in a time-constrained hackathon, building a React.js and JavaScript web application from concept to working prototype.
- Implemented UI components, integrated APIs, and iterated on features based on mentor and peer feedback, reducing revision cycles by approximately 20%.
- Practiced Agile development techniques including rapid prototyping, task delegation, and sprint-style iteration under deadline pressure.

PROJECTS

BiteHive — Canteen Management System (Full-Stack) December 2025 – Present

Technologies: React.js, Node.js, Express.js, MongoDB, REST APIs, JWT Authentication

- Built a full-stack multi-outlet canteen management platform enabling students to browse menus, place orders, and receive digital receipts, eliminating physical queuing and reducing order processing time.
- Designed and implemented a real-time order management dashboard for canteen staff, improving order accuracy and throughput across multiple outlets.
- Implemented JWT-based authentication and role-based access control (RBAC) for student and admin user roles, securing all API endpoints.
- Architected RESTful APIs in Node.js and Express.js with MongoDB as the primary database, ensuring scalable and maintainable backend services.

EShine — AI-Powered Fashion E-Commerce Platform

March 2026

Technologies: React.js, Node.js, Express.js, MongoDB, OpenAI API | Live: webstack-eshine.vercel.app

- Developed an AI-powered e-commerce platform integrating the OpenAI API to generate complete outfit recommendations across 5 occasion categories (casual, formal, festive, party, office), reducing manual product browsing from 100+ pages to a single curated AI response.
- Built a smart cart system aggregating AI-recommended items from a catalog of 100+ SKUs, streamlining the decision-to-checkout flow from multiple steps to a single consolidated view.
- Engineered dynamic occasion-based product filtering on the React.js frontend with user session management, achieving sub-second UI response times on filter changes.
- Designed and maintained a MongoDB product catalog of 100+ SKUs with structured schema, category tagging, and efficient querying for fast data retrieval.

PhysioTrack — Physiotherapy Patient Management Platform (Full-Stack)

May 2026

Technologies: React 18, Vite, Tailwind CSS, Supabase, PostgreSQL, Zustand, Netlify Functions

- Built a mobile-first patient management platform for physiotherapists to streamline appointment scheduling, treatment tracking, and patient communication workflows.
- Developed secure authentication and per-user Row Level Security (RLS) using Supabase and PostgreSQL, ensuring complete patient data privacy and role-based access control.
- Engineered appointment scheduling with Today/Week/All filtering views and integrated WhatsApp-based reminders to improve patient engagement and reduce missed sessions.
- Implemented treatment session logging with pain-scale tracking (0–10), clinical progress notes, and historical patient records for efficient therapy monitoring.
- Designed a categorized exercise library by body area, enabling physiotherapists to manage and recommend rehabilitation exercises efficiently.
- Optimized frontend performance using React 18, Vite, Zustand, and Tailwind CSS, delivering fast load times and responsive UX across mobile devices.
- Built serverless backend functionality with Netlify Functions for secure admin operations and scalable deployment architecture.

EDUCATION

Bachelor of Computer Applications (BCA)

2024 – 2027

Christ University Delhi NCR, Ghaziabad

- First Class GPA: 3.41 / 4.0 (Semester 1) — ongoing program
- Relevant coursework: Data Structures, Algorithms, Database Management Systems, Web Development, Python Programming

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Zero to Agent — AI Workflow Workshop

2026

Vercel | Global Build Week, GeeksforGeeks Noida (Nerds Room)

- Completed hands-on workshop on building durable, long-running AI agents and workflows using the Vercel Workflow Development Kit.
- Gained practical exposure to modern AI deployment infrastructure, observability, and reliability patterns for scalable applications.

Python & Artificial Intelligence Workshop

2025

IIT Delhi | Rancho Labs

- Completed intensive workshop on Python programming and core AI/ML concepts, strengthening foundations in algorithmic problem-solving and applied machine learning.

Python DSA — Certification

2025

CodeChef

- Completed structured Data Structures and Algorithms curriculum in Python, covering arrays, linked lists, trees, graphs, sorting, and optimized algorithms through 50+ practice problems.

Google

- Completed Google's Coding Fundamentals course, building a strong foundation in programming logic, syntax, and structured problem-solving techniques.
